

## **Tablica kodów ASCII**

ASCII jest siedmio-bitowym systemem kodowania znaków, używany we współczesnych komputerach oraz sieciach komputerowych, a także innych urządzeniach wyposażonych w mikroprocesor. Przyporządkowuje liczbom z zakresu 0–127: litery alfabetu łacińskiego języka angielskiego, cyfry, znaki przestankowe i inne symbole oraz polecenia sterujące. Na przykład litera „a” jest kodowana jako liczba 97, a znak spacji jest kodowany jako 32. Większość współczesnych systemów kodowania znaków jest rozszerzeniem standardu ASCII.
